

April 12, 2022**Saving Water and Electricity- activity by Faculty of Management Sciences**

The morning of 12th April started with a meaningful message of saving water and electricity. All the brilliant minds were made to brainstorm and nurture ideas on different ways of saving electricity and water at same time. The faculty of management sciences colored the campus by wearing blue and green outfits which influenced every corner of the university. Furthermore, the faculty and students joined hands to print and make creative posters which were drenched in art and driven by humorous undertakings and phrases. It was made sure that this message was spread around the block. The faculty took initiative to walk in every classroom and examination hall to deliver the message of saving electricity and asked every student to make sure each fan and light bulb is switched off when not in use.

Number of students participated: - 24
